Idea Collision Generator

A Personalized Knowledge-Intelligence Engine

The Knowledge Gap Challenge

Information Overload

Users consume vast amounts of content daily but struggle to retain and meaningfully apply what they read.

Isolated Knowledge

Information exists in silos—science, history, technology, and psychology remain disconnected without cross-pollination.

Missed Innovations

Breakthrough ideas emerge from cross-domain insights, yet manually discovering these connections is prohibitively difficult.

No existing system creates a personalized knowledge graph based on individual reading behavior. We aim to bridge this gap by connecting fragmented knowledge and generating innovative cross-domain insights.

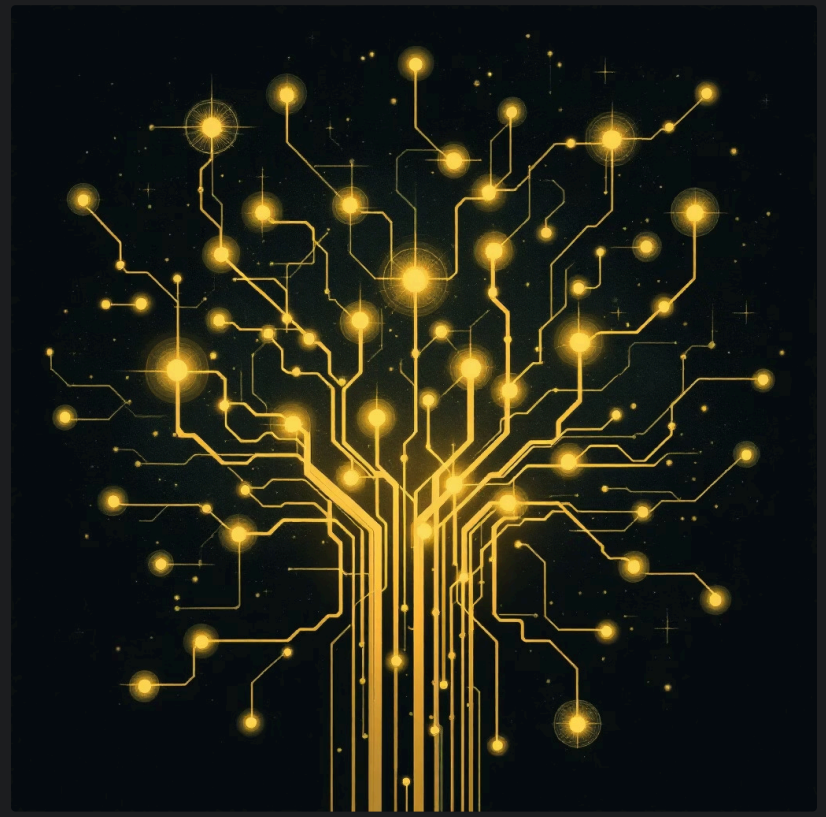
Project Vision & Overview



What We're Building

The **Idea Collision Generator** acts as a second brain that automatically captures, organizes, and connects concepts from everything you read online.

Core capabilities include:

- Capturing content via browser extension
- Extracting concepts using advanced NLP
- Building a personal knowledge graph in Neo4j
- Identifying unexpected relationships
- Generating innovative "Idea Collisions" with GPT
- Visualizing insights through an interactive dashboard

Made with GAMMA

System Capabilities

Intelligent Tracking

Automatic article detection and text extraction from your browsing activity, seamlessly integrated into your workflow.

Concept Extraction

NLP-powered analysis using Named Entity Recognition, keyword extraction, and semantic embeddings for deep understanding.

Knowledge Mapping

Dynamic graph construction that reveals relationships between concepts, domains, and ideas across your reading history.

Collision Generation

GPT-powered insight discovery that identifies distant, uncommon connections to spark creative breakthroughs.

Visual Intelligence

Interactive dashboard displaying your knowledge graph, collision insights, and reading analytics in real-time.

Cross-Domain Discovery

Automatic identification of concepts spanning multiple disciplines to reveal hidden innovation opportunities.

Made with GAMMA

System Architecture

1

Browser Extension

Captures reading activity

2

FastAPI Backend

Processes & orchestrates

3

NLP Pipeline

Extracts concepts

4

Graph Database

Stores relationships

5

GPT Engine

Generates collisions

6

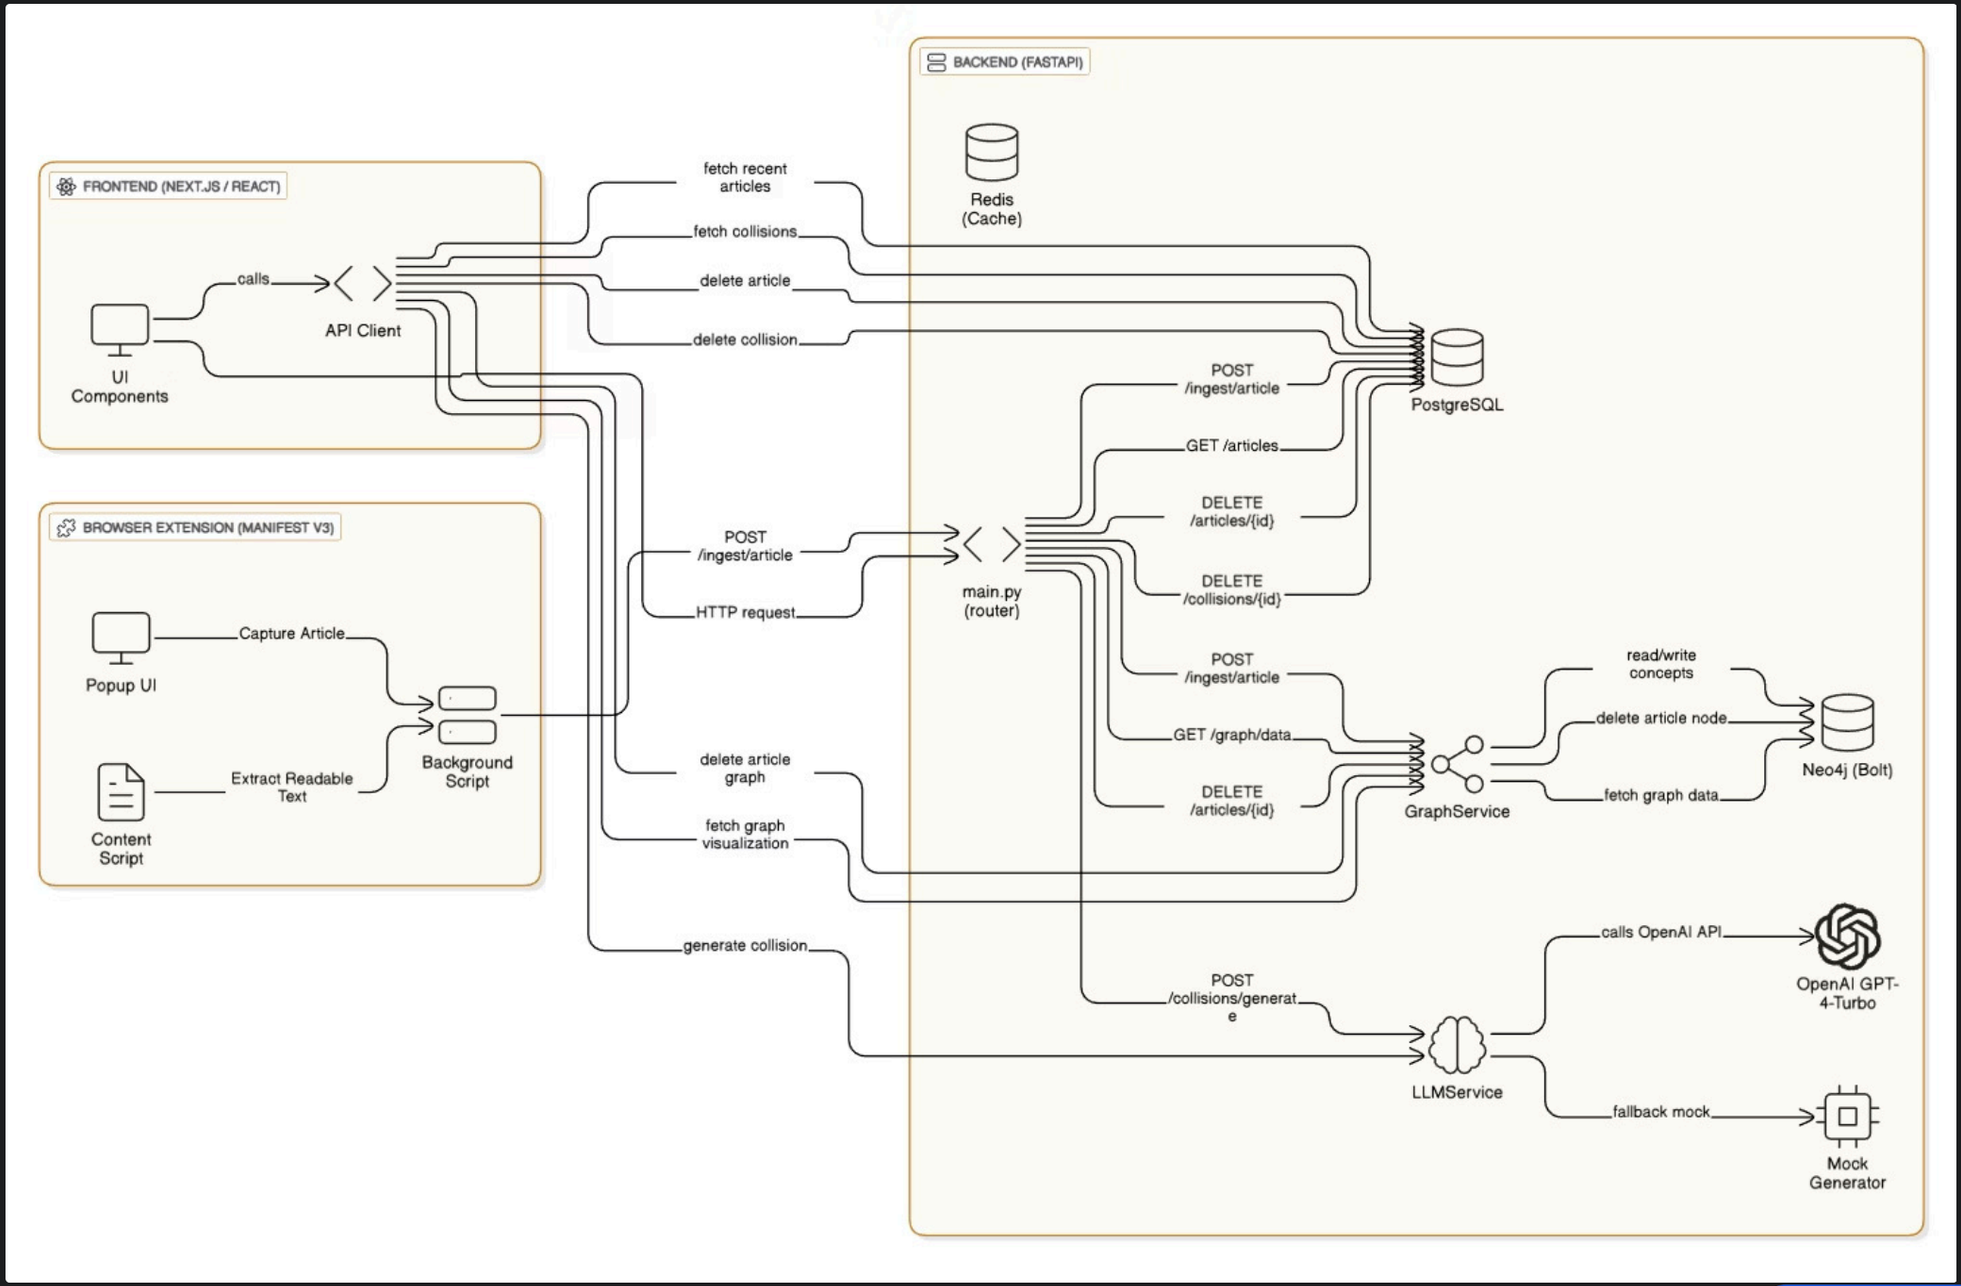
Next.js Dashboard

Visualizes insights

Data flows seamlessly from capture through processing, storage, analysis, and visualization, creating a complete knowledge-intelligence pipeline.

Made with GAMMA

Detailed Module Architecture



Made with GAMMA

Technology Stack

Frontend

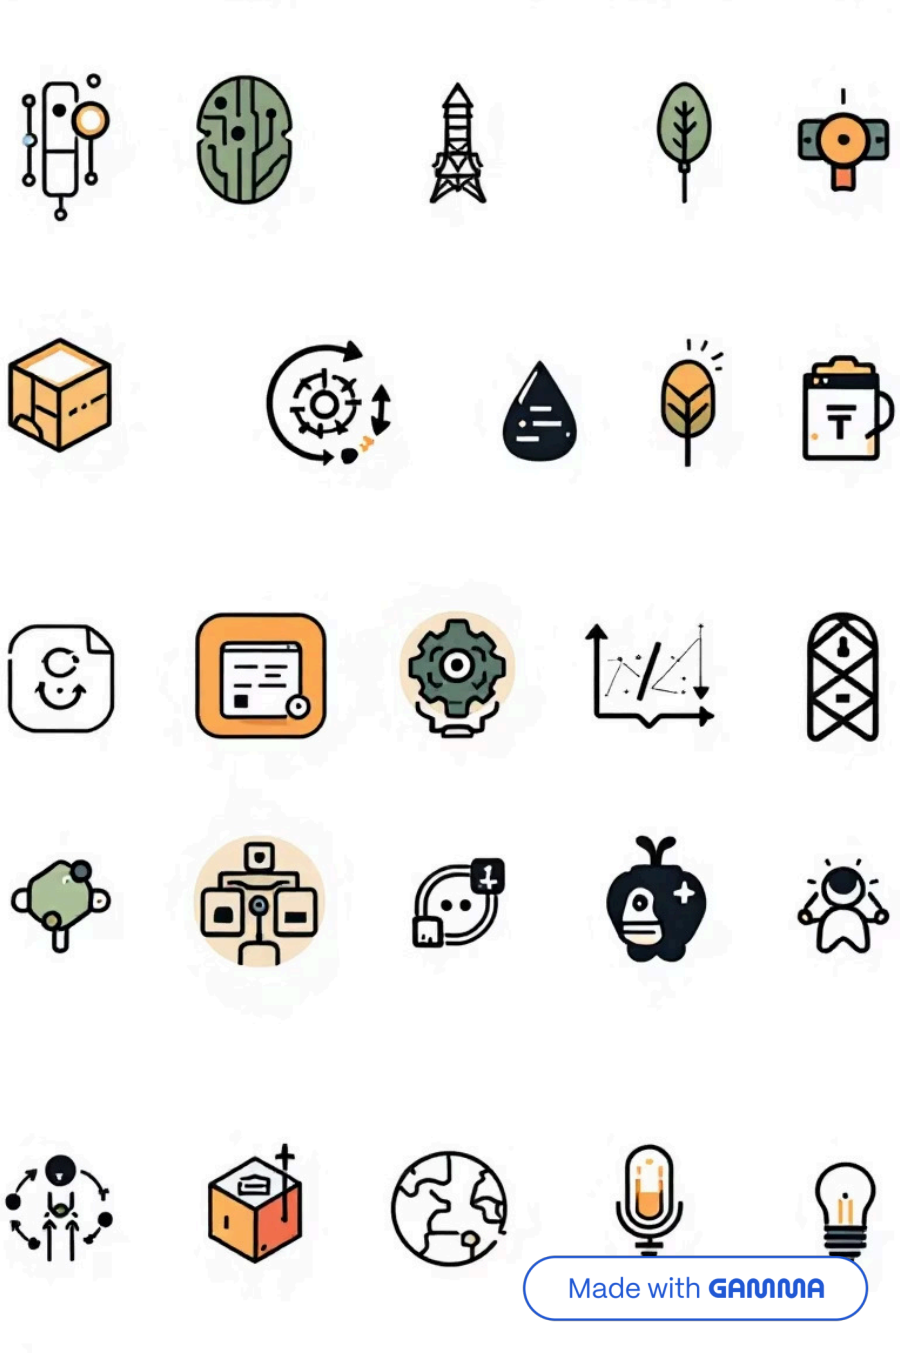
- Next.js 14
- React 18
- TypeScript
- Tailwind CSS
- D3.js / Three.js
- Zustand

Backend & NLP

- FastAPI
- Celery & Redis
- spaCy
- NLTK
- HuggingFace Transformers
- Sentence Transformers

Data & AI

- PostgreSQL
- Neo4j
- Redis Cache
- MinIO / AWS S3
- OpenAI GPT-4



Made with GAMMA

Implementation Progress

1

Completed Components

- Browser extension foundation with article detection
- FastAPI ingestion endpoints
- Basic NLP processing pipeline
- Embedding generation system
- PostgreSQL database schema

2

Partially Implemented

- Neo4j graph data model
- Next.js dashboard interface
- Concept relationship mapping

3

In Development

- GPT collision generation workflow
- Advanced graph visualization
- Analytics dashboard
- Scoring mechanisms

Made with GAMMA

Remaining Development Goals

Graph Enhancement

Complete Neo4j relationship modeling, implement advanced query patterns, and optimize graph traversal algorithms.

Collision Intelligence

Build GPT integration workflow, develop scoring mechanisms for novelty and distance, implement domain spread analysis.

Dashboard & Visualization

Create collision explorer views, implement 2D/3D graph viewer, build analytics pages for reading trends and insights.

User Controls

Add privacy settings, implement content blacklisting, create pause/resume tracking functionality.

Deployment

Configure production infrastructure, establish CI/CD pipelines, implement monitoring and logging systems.

Made with GAMMA

Future Vision & Impact

Enhanced Capabilities

- Multi-concept collision blending (3–5 concepts)
- Personal AI assistant trained on your knowledge
- Intelligent reading recommendations
- Offline privacy mode
- Mobile application integration
- Advanced highlight tracking

Real-World Applications

- Research acceleration for academics
- Innovation catalyst for startups
- Strategic planning for enterprises
- Creative ideation for designers
- Learning enhancement for students

> *"A unique system demonstrating full-stack engineering, advanced AI integration, and graph database expertise—bridging the gap between knowledge consumption and creative innovation."*

Thank You
